

Getting to know GHP

GHP is born out of a fundamental desire and necessity to decarbonize the planet.

Contributing from our expertise in naval construction, closely linked to the Patagonia, Tierra del Fuego, and the Magallanic region.

Geographies where nature's abundance overflows to fuel clean energies.

In collaboration with Astilleros Unidelta, we envision the establishment of a self-sustaining H2 plant, primarily powered by hydraulic and wind energy.

This initiative also encompasses the transportation and dispensing of H2, as well as the necessary modifications to vessels that currently run on diesel.

Through this, we achieve the full H2 process from production to utilization.

As we find ourselves navigating the tumultuous seas of our ongoing climate crisis and brace for the imminent global transformation, a remarkable vision emerges.

Capitalizing on the untamed beauty of mountain rivers, cascading waterfalls, and the fierce Patagonian winds.

We set forth on a journey toward a future that shuns emissions.

**A future that
gleams with a vibrant
green promise.**
